

THE SCIENCE OF THE MIND

THE SCIENCE OF THE MIND

NAME: _____

DATE: _____

QUESTION

1. What is the function of the frontal lobe?

2. How does the brain process information?

ANSWER

1. The frontal lobe is responsible for executive functions such as planning, decision-making, and problem-solving.

2. The brain processes information through a complex network of neurons, where electrical signals are transmitted across synapses.

CONCLUSION

The mind and brain are intricately linked, with the brain serving as the physical substrate for mental processes. Understanding the science of the mind helps us appreciate the complexity of human cognition and behavior.
